

### Quick mask

A Quick Mask **temporarily turns the area inside your selection a semi-opaque red** so that you can see what part of the image you have and have not selected

### Clipping mask:

A clipping mask **lets you use the content of a layer to mask the layers above it**. Content of the bottom or base layer determines the masking. The non-transparent part of the base layer clips (reveals) the content of the layers above it in the clipping mask. All other content in the clipped layers is masked out (hidden)

Vector masking:

A vector mask is a **resolution independent path that clips out the contents of the layer**. Vector masks are usually more accurate than those created with pixel-based tools.

Layer masking:
